INTRODUCTION

This report summarizes data compiled from original birth, death, stillbirth and induced abortion, marriage and divorce records filed with the Office of Vital Records as required by law. Standard forms recommended by the National Center for Health Statistics are used for all records, with the exception of marriage and divorce.

Responsibility for the filing of the **birth certificate** lies with the hospital medical records or nursing personnel, the physician, midwife, or other attendant. Funeral Directors, or persons acting as such, are legally charged with filing **death certificates** and **fetal death certificates**. County Recorders are responsible for forwarding the original **marriage certificates** or computerized tapes containing marriage data to the Office of Vital Records for maintenance of a data file. The County Clerk of each county is required to submit a **report of decree of divorce/annulment** to the Office of Vital Records within a month of the occurrence. **Induced abortion reports** are completed and sent in directly to the Office of Vital Records by the physician, hospital or clinic. The quality of data presented in the report is directly related to the completeness and accuracy of the information contained on the certificates.

Users of this publication are welcome to offer their comments and/or suggestions concerning format, content, technical aspects of the publication, or requests for additional data by submitting them to:

Office of Vital Records
Bureau of Health Planning and Statistics
Nevada State Health Division
505 E. King St., Room 102
Carson City, Nevada 89701-4749
(775) 687-4481

THE NEVADA REGISTRATION SYSTEM

The Nevada Office of Vital Records has three distinct components:

- The Vital Records Section where public requests for certified copies and amendments of said copies are processed.
- The Quality Control/Data Entry Section where the records are checked for completeness and accuracy and then entered into a database onto the State Mainframe Computer System.
- The Statistical Section that analyzes and publishes reports based on statistics from the database and provides technical assistance to users of the data.

The vital events of deaths, marriages and divorces are first recorded at the county level before being forwarded to the State Registrar. Births in all counties are recorded electronically, directly with the State Registrar, except in Clark and Washoe Counties, where they are initially processed and then transmitted to the State Registrar. Abortions are reported directly to the Office of Vital Records for encoding and entering into the State's database. All records are checked for completeness and accuracy, and then given a state file number before encoding and entering into the State's database. Birth and death records are kept on permanent file for certification use and amendment when necessary by the public and various government agencies. Marriage, divorce, and abortion records are not maintained after entry into the State's database.

DEFINITIONS

- ABORTION:*** The termination of a human pregnancy with an intention other than to produce a live birth or to remove a dead fetus.
- DEATH:*** A person who has sustained irreversible cessation of all functioning of the brain, including the brain stem, is considered dead.
- DIVORCE:*** Termination of a marriage.
- FETAL DEATH:*** A birth that occurs after at least 20 weeks gestation in which the child shows no evidence of life after complete birth.
- INFANT DEATH:*** Deaths occurring to individuals of less than one year of age.
- LIVE BIRTH:*** A birth in which the child shows evidence of life after complete birth. A birth is complete when the child is entirely outside the mother, even if the cord is uncut and the placenta is still attached. Evidence of life includes heart action, breathing, or coordinated movement of voluntary muscles.
- LOW BIRTHWEIGHT:*** A birth wherein the birth weight is less than 2,500 grams (5 ½ pounds).
- MARRIAGE:*** A formal mutual relation of husband and wife that is filed with the County Recorder in the county where the license was issued.
- NEONATAL DEATH:*** Death occurring to infants in the first 27 days of life.

OCCURRENCE

(COUNTY OF):

Data allocated by the location of where the event actually occurred.

PERINATAL DEATH:

Death occurring to a fetus of 20 weeks gestation or more, including infant deaths occurring within 27 days of life.

PRENATAL CARE:

The care received by the mother from a health professional or midwife during the length of the pregnancy.

RESIDENCE

(COUNTY OF):

The usual residence of the individual. For deaths, this is defined as the usual residence of decedent as indicated on the certificate. For births and fetal deaths, the residence is defined as the usual place of residence of the mother.

UNDERLYING CAUSE

OF DEATH:

The disease or condition which gave rise to the chain of morbid events leading to death, including the circumstances of an accident or violent event that produced a fatal injury.

S.I.D.S.:

Death due to Sudden Infant Death Syndrome.

FORMULAS FOR RATES

<i>Abortion Rate</i>	=	$\frac{\text{Number of Abortions X 1,000}}{\text{Total Live Births}}$
<i>Cause-Specific Rate</i>	=	$\frac{\text{Number of Deaths from a Specific Cause X 1,000 or 100,000}}{\text{Population}}$
<i>Crude Birth Rate</i>	=	$\frac{\text{Number of Births X 1,000}}{\text{Population}}$
<i>Crude Death Rate</i>	=	$\frac{\text{Number of Deaths X 1,000 or 100,000}}{\text{Population}}$
<i>Divorce Rate</i>	=	$\frac{\text{Number of Divorces and Annulments X 1,000}}{\text{Population}}$
<i>Fertility Rate</i>	=	$\frac{\text{Number of Live Births X 1,000}}{\text{Female Population (15-44)}}$
<i>Fetal Mortality Rate</i>	=	$\frac{\text{Number of Fetal Deaths X 1,000}}{\text{Total Number of Live Births and Fetal Deaths}}$
<i>Infant Mortality Rate</i>	=	$\frac{\text{Number of Infant Deaths X 1,000}}{\text{Total Number of Live Births}}$
<i>Low Birth weight Rate</i>	=	$\frac{\text{Number of Low Birth weight Births X 1,000}}{\text{Total Number of Live Births}}$
<i>Marriage Rate</i>	=	$\frac{\text{Number of Marriages X 1,000}}{\text{Population}}$

Neonatal Mortality Rate = $\frac{\text{Number of Neonatal Deaths X 1,000}}{\text{Total Number of Live Births}}$

Perinatal Mortality Rate = $\frac{\text{Number of Perinatal Deaths X 1,000}}{\text{Total Number of Live Birth and Fetal Deaths}}$

Post-Neonatal Mortality = $\frac{\text{Number of Infant Deaths and Neonatal Deaths X 1,000}}{\text{Total Number of Live Births}}$

TECHNICAL NOTES

RACE AND ETHNICITY: Hispanics are an ethnic group, not a race, and may include all races within their ethnic classification. In this report, Asian-Pacific Islander, Black, Native-American, and White exclude Hispanics; therefore, no duplicate counting exists.

POPULATION DATA: The Nevada population data is based on the database established by the Nevada State Demographer's Office and the Nevada Department of Taxation.

COUNTY COMPARISONS: The population size of the counties in Nevada is widely varied, from one thousand to over one million. Because of these differences, caution should be used when interpreting the rate comparisons for counties.

REGIONAL COMPARISONS: Eighty five percent (85%) of Nevada's population resides in the urban areas of Clark (Las Vegas) and Washoe (Reno) Counties. In this report, data is stratified into three regions within the State as follows: Clark County, Washoe County, and All Other Counties (all remaining 15 counties).

METHODS FOR AGE ADJUSTMENT AND STATISTICAL ANALYSIS OF MORTALITY RATES: In order to make meaningful comparisons between mortality rates for the residents from different regions, or from different race/ethnic groups, differences in the age characteristics of the populations should be taken into account. For example, one would expect that the mortality rate for heart disease would be high in a population that has a high proportion of older individuals. Age-adjustment is the application of the age-specific rates in a population of interest to a standardized age distribution in order to eliminate the differences in observed rates that result from age differences in populations compared. This adjustment is usually done when comparing two or more populations at one point in time or one population at two or more points in time.

In this report, the death rates are age-adjusted to the US standard million population (relative age distribution of 1940 enumerated population of the United States totaling 1,000,000). This method produces the rate that would be expected if the population of interest had the same population age distribution as the standard population.

Adjusted rates were calculated in the following manner:

- The expected number of deaths in each age group was determined by multiplying the age-specific rates (N_i/P_i) by the corresponding age-specific standard population total (S_i).
- Age adjusted rates (AAR) per 100,000 population were calculated by dividing the expected total number of deaths (E_i) by the total standard population and multiplying by 100,000.

From 1990 to 1997, Nevada was by far the fastest growing state in the nation and Las Vegas was the fastest growing metropolitan area in both Nevada and the nation. The 1990 Nevada population of 1,201,000 grew by almost 45% to 1,741,000 in 1997 and is projected to surpass two million by 2000. The vast majority of growth has been by in-migration. The Las Vegas and Reno metropolitan areas contain more than four out of every five (85%) of the state's residents.

The age mix of Nevada's population varies from the nation as a whole by having a higher share of people in the age groups between 25 and 45 and a lower share of elderly persons. In 1997, about 68% of Nevada's population was White-Non Hispanic. Black-Non Hispanic, Native American-Non Hispanic, Asian-Non Hispanic, and Hispanic consist of 6.8%, 1.5%, 3.0%, and 11.9% respectively. The fastest growing ethnic group in the state is Hispanic origin, which increased over 50% since 1990.

SOURCE: The Nevada population data are based on the database established by the Nevada State Demographer's Office.

POPULATION

Figure 1. Population Pyramid in Nevada, 1997

Table 1. Nevada Population, 1991-1997

Year	Total	Gender		Race/Ethnicity					County/Region		
		Male	Female	White	Black	Native	Asian	Hispanic	Washoe	Clark	Rural
1991	1,297,910	660,212	637,698	1,019,575	83,517	18,953	38,855	137,010	262,260	820,804	214,846
1992	1,343,940	683,000	660,940	1,052,047	87,242	19,684	40,216	144,752	265,660	856,339	221,941
1993	1,398,760	710,216	688,544	1,091,058	91,597	20,552	41,853	153,700	271,770	898,008	228,982
1994	1,494,230	757,982	736,248	1,161,359	98,708	22,028	44,673	167,461	282,630	971,658	239,942
1995	1,582,389	801,935	780,454	1,225,482	105,460	23,408	47,231	180,808	294,290	1,036,290	251,809
1996	1,688,140	854,685	833,455	1,302,715	113,511	25,063	50,259	196,592	306,810	1,115,940	265,390
1997	1,740,897	880,533	860,364	1,338,599	118,102	25,944	51,699	206,552	308,579	1,163,207	269,111

Nevada experienced an increasing birth rate from 1985 to 1990 followed by a moderate decrease in the rate through 1996 with a slight increase from 1996 to 1997. There were a total of 26,971 live births in Nevada in 1997. The crude birth rate for Nevada residents was 15.3 per 1,000 population, while the Hispanic ethnic group had a crude birth rate of 37.6 per 1,000 population.

The rate of prenatal care in the first trimester increased from 71.6% in 1992 to 77.8% in 1997. Among the racial/ethnic groups, Whites had the highest prenatal care rate at 84.2%, followed by Asians 80.8%, Native Americans 73.4, Blacks 69.7% and Hispanics 66.6%.

The incidence of low birthweight babies in Nevada was 7.6% in 1997. Among the racial/ethnic groups, Blacks had the highest low birthweight rate at 14.1%..

Teen pregnancy rates in Nevada decreased during the past six years for all three teen age groups. In 1992, the pregnancy rates for ages 10-14, 15-17 and 18-19 were 2.7, 62.4 and 158.9 per 1,000 population respectively, while in 1997, the rates decreased to 1.8, 54.7 and 135.9 per 1,000 respectively.

NOTE: DIG1-5 are determinations of the numbers diagnosed with anomalies:

DIG1 = 608 newborns with one anomalies;

DIG2 = 52 newborns with two anomalies;

DIG3 = 7 newborns with three anomalies;

DIG4 = 1 newborns with four anomalies;

DIG5 = 1 newborns with five anomalies;

This reflects 608 individuals diagnosed with anomalies, including 61 individuals with two or more anomalies.

NOTE: DIG1-5 are determinations of the numbers diagnosed with anomalies:

DIG1 = 416 newborns with one anomalies;

DIG2 = 53 newborns with two anomalies;

DIG3 = 9 newborns with three anomalies;

DIG4 = 6 newborns with four anomalies;

DIG5 = 4 newborns with five anomalies;

This reflects 416 individuals diagnosed with anomalies, including 72 individuals with two or more anomalies.

Recorded outcomes of pregnancies include live births, fetal deaths, and induced abortions. Between 1996 and 1997, total pregnancies increased by 2.9%. Among them, live births increased by 3.6%, fetal deaths increased 19.8%, induced abortions, however, decreased by 1.1%..

Induced abortions showed a slight decrease overall between 1996 and 1997, but the rate remained about the same. The teenage share of abortions remained constant at approximately one out of six overall. In 1996 and 1997 approximately 20% of pregnancies among Nevada residents resulted in induced abortions.

In 1997, Nevada's infant mortality rate was 6.2 per 1,000 live births, which was among the lowest in the nation and below the national year 2,000 objectives of 7.0 per 1,000 live births. Among the racial/ethnicity groups, Blacks had the highest infant mortality rate at 13.6 and Asians had the lowest rate at 3.6 per 1,000 live births.

Diseases of the heart and malignant neoplasms (i.e. cancers) ranked one and two for the leading causes of death in both 1996 and 1997 in Nevada. In 1997 these two diseases were responsible for 6,928 deaths in Nevada, accounting for 52.9% of total deaths in the State. However, these two causes accounted for slightly lower death rates in Nevada than nationally, when age-adjusted comparisons were made.

After age-adjustment, race/ethnicity group comparisons indicate that Blacks had the highest death rates for both diseases of the heart and malignant neoplasms.

In 1997, Nevada's age-adjusted suicide death rate was almost twice the national average (age-adjustment rate: 20.7/100,000 (NV97) vs. 10.8/100,000 (US96)). Nevada has continually ranked highest in the nation during the past 10 years. Regional, race/ethnicity, and age analysis showed the highest suicide death rates were among All Other Counties, Native Americans, and the age group older than 65 years.

Nevada had slightly higher than US average for death rates of motor vehicle crashes in 1997. The highest groups were All Other Counties, Native Americans, and two age groups: age older than 75 and 15-24 year olds.
